

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously Amended) A terminal apparatus comprising:
 - a storage section that stores stored content;
 - a content receiving section that receives content by means of broadcasting or communication;
 - a received content storage section that stores received content;
 - a playback section that plays back said stored content or said received content; and
 - a playback control section that causes said playback section to switch between playing back said stored content and playing back said received content based on at least one of playback conditions of said stored content and reception conditions of said received content.

2. (Original) The terminal apparatus according to claim 1, further comprising:

a content list management section that manages a content list storing at least one or more combinations of an address of content relating to a location within a predetermined area and said location;

a location detection section that detects current location information; and

a received content determination section that determines content that should be received from said content list based on said current location information;

wherein:

said content receiving section receives content relating to a current location determined by said received content determination section; and

said playback control section causes said playback section to switch between playing back that content and playing back said stored content.

3. (Original) The terminal apparatus according to claim 2, wherein:

said location detection section detects a direction of movement or speed of movement of an apparatus main unit; and

said received content determination section predicts a playback time of day of content received by said content receiving section from a playback time period of content being played back by said playback section, and determines content relating to a movement destination location of an apparatus main unit at said predicted playback time of day to be content that should be received.

4. (Currently Amended) The terminal apparatus according to claim 2 or-
claim 3, further comprising an attribute output section that records attribute
information indicating an interest of a user and outputs said attribute
information to said received content determination section, wherein said
received content determination section determines content that should be
received from said content list based on said current location information
and said attribute information.

5. (Original) The terminal apparatus according to claim 4, wherein part of
information contained in stored content of said storage section is recorded
in said attribute output section as said attribute information.

6. (Cancelled)

7. (Currently Amended) The terminal apparatus according to ~~any one of~~
~~claim 1 through claim 5~~, further comprising a save instruction section that
gives an instruction for saving or deletion of content of said received
content storage section in accordance with operational input of a user.

8. (Original) The terminal apparatus according to claim 7, wherein part of information contained in content for which there is a save instruction from said save instruction section is recorded in said attribute output section as said attribute information.

9. (Previously Amended) An information playback method comprising:
a step of receiving content by means of broadcasting or communication;
a step of storing received content in a received content storage section;
and
a step of switching between playing back stored content of a storage section that stores content and playing back said received content based on playback conditions of said stored content and reception conditions of said received content.

10. (Original) The information playback method according to claim 9, further comprising:
a step of detecting current location information; and
a step of determining content that should be received from a content list storing at least one or more combinations of an address of content relating to a location within a predetermined area and said location based on said current location information;

wherein content relating to said determined current location is received, and playback is switched between that content and said stored content.

11. (Original) The information playback method according to claim 9, wherein, when current location information is detected, direction of movement or speed of movement of an apparatus main unit is detected, a playback time of day of content to be received is predicted from a playback time period of content of said storage section being played back, and content relating to a movement destination location of said apparatus main unit at said predicted playback time of day is determined to be content that should be received.

12. (Currently Amended) The information playback method according to claim 10 or ~~claim 11~~, further comprising a step of recording attribute information indicating an interest of a user, wherein, when content that should be received is determined, content that should be received is determined from said content list based on said current location information and said attribute information.

13. (Original) The information playback method according to claim 12, wherein part of information contained in stored content of said storage section is recorded as said attribute information.

14. (Cancelled)

15. (Currently Amended) The information playback method according to
~~any one of claim 9 through claim 13~~, further comprising a step of giving an
instruction for saving or deletion of content of said received content storage
section in accordance with operational input of a user.

16. (Original) The information playback method according to claim 15,
wherein part of information contained in content for which there is a save
instruction from a user is recorded as said attribute information.
